# Greenbank Engineering Services

## Overview

Formerly the workshop and engineering arm of Hargreaves Engineering Contracts, Greenbank Engineering Services (GES) was acquired by the Greenbank Group in 2014 to bring additional engineering capacity to the Greenbank Group and broaden the Group's customer base.

Based in Creswell, Nottinghamshire, GES has many years of experience providing structural, mechanical engineering and project management services. Services include general steel fabrications, machined components and custom-made shop fittings.

GES is supported by but work independently of the Group and work closely with customers in the steel, power, petrochemical and heavy Industry.

No enquiry is too small or too large for GES to consider, and supported by drawing and Group technical services we can survey sites and prepare detailed working, assembly and arrangement drawings for customers if required.

GES offers bespoke jobbing services and can provide a fast turnaround on new-build and refurbishment work. Fundamentally GES offers:

- ◆ Design and drafting services.
- ◆ Bespoke workshop repair, modification and manufacture services.
- ◆ Project management, operation and maintenance services.
- ◆ Mechanical plant overhaul, maintenance, installation and spares management.
- ◆ Pipework refurbishment, modifications welding and testing.
- ◆ Structural design, fabrication and construction projects.

GES, part of the Greenbank Group, is a privately owned Nottinghamshire-based engineering company with many years' experience in machining, fitting, fabrication and welding.

GES is proud of its reputation for reliability, timeliness, quality and competitiveness with our customer base and the heavy industrial engineering industry.

The combination of a friendly and professional service and having the ability to meet tight and difficult delivery programmes enables a secure and bespoke service for our growing customer base. The goal is to develop our customer services and our customer relations to become the reliable and obvious choice for our customers' needs.

### Engineering and Design Services

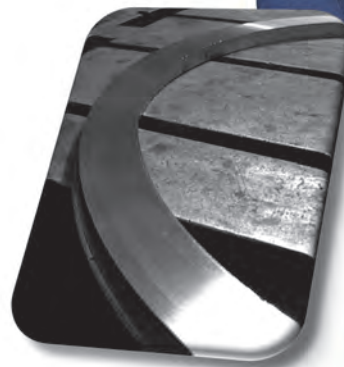

- ◆ Detailed site survey and measurement
- ◆ Mechanical and structural design and assessment
- ◆ Isometric pipe routing and 3D modelling, 2D and 3D layout plans and elevations
- ◆ Pipe, ducting and supporting systems
- ◆ General arrangement and installation drawings
- ◆ Feasibility, assessment, engineering studies and scheme proposals

### Precision Engineering

- ◆ Diamond drilling
- ◆ Machine tool refurbishment
- ◆ Vertical and horizontal boring/milling/slotting
- ◆ Shafts manufactured or refurbished
- ◆ Surface grinding
- ◆ Gearbox overhauls
- ◆ Propshaft overhauls (Hardy Spicer)
- ◆ Axle and wheel assemblies
- ◆ Drive-shaft and sprocket assemblies
- ◆ Winch-gear

### Fabrication, Fitting and Workshop Services

- ◆ Heavy and light fabrication and welding
- ◆ Rolling, bending and profiling
- ◆ Bespoke workshop repairs, overhauls, machining and fabrications
- ◆ 20 tonne overhead crane capacity
- ◆ Extensive range of workshop machinery including:
  - Metal press with 150 tonnes pressure capacity
  - Metal worker/hole puncher, radial arm drill
  - Heavy rolling and guillotine capacity
  - Plasma cutting
- ◆ Blast and paint
